

MOHAMMED SHABAZ S

Embedded Engineer | Automotive Embedded Systems

Ballari, Karnataka | +91 79755 12403 | md.shabaz.2005@gmail.com | [in](#) LinkedIn | [GitHub](#)

SUMMARY

Final-year Electronics & Communication Engineering student (CGPA 8.38) focused on embedded and automotive firmware — microcontroller systems, finite-state machines and non-blocking real-time design in Embedded C — with a working software and computer-vision foundation in C, C++ and Python. Internship experience at Nokia and iHelp Robotics.

TECHNICAL SKILLS

Embedded: Embedded C, Microcontrollers

Languages: C, C++, Python, SQL

Tools & Platforms: Android Studio, Git & GitHub, OpenCV

CS Fundamentals: Data Structures & Algorithms, Operating Systems, DBMS, Computer Networks

EXPERIENCE

Student Intern

16 September 2026 – Present

Nokia Solutions and Networks India

Bangalore

- Working as a Student Intern at Nokia.

AI Research Intern – Deep Learning & Model Development

23 March 2026 – 23 August 2026

iHelp Robotics Private Limited · Project: MITRA

Remote

- Improved live camera-stream reliability in the MITRA assistive Android app across 2 video sources (hardware WiFi/RTSP and phone-camera fallback): cut stream search delay, persisted the last working transport, and added refresh/stall recovery.
- Engineered a visual-freeze watchdog plus 3 status/guard mechanisms — stream-status and cloud-status panels and a WebSocket-gated send guard — and fixed a live-refresh loop that recurred after 5 minutes.
- Hardened offline voice commands (offline-preferred recognition with model recovery and microphone retry backoff) and verified builds across multiple devices with Gradle test/lint/assemble; delivered 6+ app-side improvements while model and backend stayed with a separate team.

Student Intern – Skin Disease Classification

1–30 June 2026

IEEE EMBS Pune Section

Remote

- Trained and evaluated a skin-disease image classifier in a 3-member team during a 1-month IEEE EMBS internship — model selection, training, evaluation, and Python image-processing and testing; delivered a working demo-level workflow.

PROJECTS

Automotive Body Control Module

[GitHub](#)

ESP32, Embedded C, Finite-State Machine, GPIO, OLED

- Programmed an ESP32 body-control module with a 3-state (OFF/ACC/ON) ignition FSM driving 6+ vehicle functions: indicators, synchronized hazard, brake logic, buzzer feedback and an OLED dashboard.
- Architected a non-blocking millis()-based scheduler with brake debouncing, GPIO abstraction and edge-triggered serial logging for predictable real-time behavior.

Smart Wellness Desk Assistant

[GitHub](#)

STM32 Nucleo-L476RG, STM32 HAL, Embedded C, Sensors · College team project

- Interfaced 2 sensor types (ultrasonic presence and ADC temperature), an I2C OLED, timers and buzzer alerts on an STM32 Nucleo-L476RG as part of a college team; handled wiring, testing and debugging in STM32CubeIDE.

VisionPay — Real-Time Indian Currency Detection

[GitHub](#)

Python, OpenCV, TensorFlow Lite, MobileNetV2, Text-to-Speech

- Created an offline, real-time tool that recognizes Indian currency from a live webcam and speaks the result aloud for visually impaired users.
- Collected ~400 images per denomination across 6 classes (Rs.10–Rs.500) and trained a MobileNetV2 classifier converted to TensorFlow Lite, reporting ~93% validation accuracy.
- Strengthened real-time reliability with 4 mechanisms: confidence/margin gating, temporal smoothing, a background class, and an auto-count mode.

EDUCATION

B.E. Electronics & Communication Engineering

Expected 2027

Ballari Institute of Technology and Management (BITM), Ballari

Final Year · CGPA 8.38

Class 12: 80% · Class 10: 86.88%

LEADERSHIP & ACTIVITIES

- Vice-Chair, IEEE CAS Society, IEEE Student Branch BITM (promoted from Treasurer); Treasurer, BITM Robotics Club.
- Google Student Ambassador (2025); Selected Participant, IEEE SPACE 2026 — B.Tech Initiative.
- Embedded AI Systems workshop with STMicroelectronics (DigiToad, 2025); Participant, Techzone Nationals 2K25 Hardware Hackathon.
